SAFETY

# THE MACHINE SAFETY EXPERTS

As a young boy, Jack Reiter came to understand the importance of machine safety. As his father Jay operated their home table saw, a board began to bind, then kicked back, detaching most of his right thumb while he was fumbling to find the "Off" switch. This moment in time was etched in Jack and his father's minds, and with it came a determination to guard machines properly to avoid these types of accidental injuries.

Jack and his father began designing a rough prototype of the new hands-free emergency stop and over the next number of years refined their concept. After Jay became seriously ill and unable to work, Jack redoubled his efforts and founded ReiTech in 1994. He then went on to complete the design of the new standardized, hands-free emergency stop control he and his father had worked tirelessly on for so many years.

As the company grew, they realized the need for better tools to help guide users through the difficult task of machine inspection and documentation, and with that, Machine Safety Management was formed. With experience in machine safety including Best New Products awards, expert witness testimony, and service on the ANSI B11 19 committee on machine guarding, Machine Safety Management and ReiTech have come to be known as "The Experts in Machine Safety".

Machine Safety Management is built on a passion that cares first for people, is persistent and flexible in finding a solution, and humbly knows that even the most well trained operators need protection. With decades of machine safety expertise and an unmatched breadth of simple to use products and services, Machine Safety Management helps to protect operators and organizations with a proactive safety program and properly documented due diligence.

*Our purpose is to help prevent machine safety accidents by using a caring and persistent approach to solving problems that will help safeguard operators, one machine at a time.*

- Jack Reiter, Founder

## BE PREPARED

WHAT ARE EMPLOYER'S REQUIREMENTS?

- Offer a safe place of employment free from recognized hazards
- Provide, communicate and enforce a written safety and health plan to the employees
- Document due diligence
- Inspect machines for safety every 60 days in the U.S. and every 30 days in Canada

## KNOW WHAT YOU'RE UP AGAINST

The landscape is changing as social and legal concerns continue to increase in safety. A "Psychology of Entitlement" (a.k.a. - winning the lottery) is growing with more people wanting to hold others responsible for their misfortunes. Lawsuits are on the rise and courts are often sympathetic to the injured as is the frequency of those challenging authority.

Machine guarding is a key regulatory focus. According to their websites, it is a top ten citation for OSHA and the top violation for Ontario schools.

## PROVEN PROCESS

- Demonstrate Machine Safety Management's process
- Software installation and setup
- Perform machine audits
- Develop recommendations for any deficiencies
- Build and install product solutions
- Document all due diligence

# A COMPREHENSIVE APPROACH TO MACHINE SAFETY

## WHAT WE DELIVER

- Simple audit process requiring minimal training with more consistency
- Web based platform consolidates documented due diligence for easy retrieval
- Remote management viewing capability of all sites, audits and machine conditions
- Platform that demonstrates proactive safety plan for leadership
- Provides you with the tools to recognize hazards, document audit inspections and training for your machine operators

## WE'RE NOT DONE UNTIL YOU'RE SATISFIED

# DO YOU HAVE A COMPLETE MACHINE SAFETY PROGRAM IN PLACE?

Give us a call today and learn more about how  
Machine Safety Management can partner with you to help reduce machine injuries  
and establish a proactive safety plan.
